TagSoup	http://ccil.org/~cowan/XML/tagsoup/	SAX-compliant parser written in Java that, instead of parsing well-formed or valid XML, parses HTML as it is found in the wild: poor, nasty and brutish, though quite often far from short. TagSoup is designed for people who have to process this stuff using some semblance of a rational application design. By providing a SAX interface, it allows standard XML tools to be applied to even the worst HTML. TagSoup also includes a command-line processor that reads HTML files and can generate either clean HTML or well-formed XML that is a close approximation to XHTML.	http://ccil.org/~cowan/XML/tagsoup/ Distributed under Academic Free License (Included in NOTICE Folder)
